Irradiation of super powerful AWG electrons

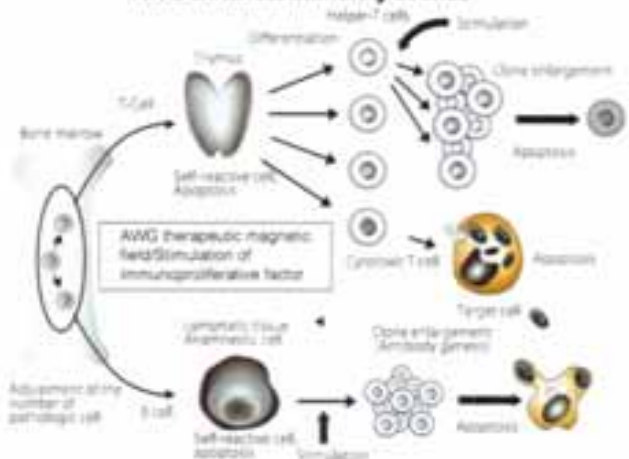

Cells of the whole human body are superbly controlled by electrons.

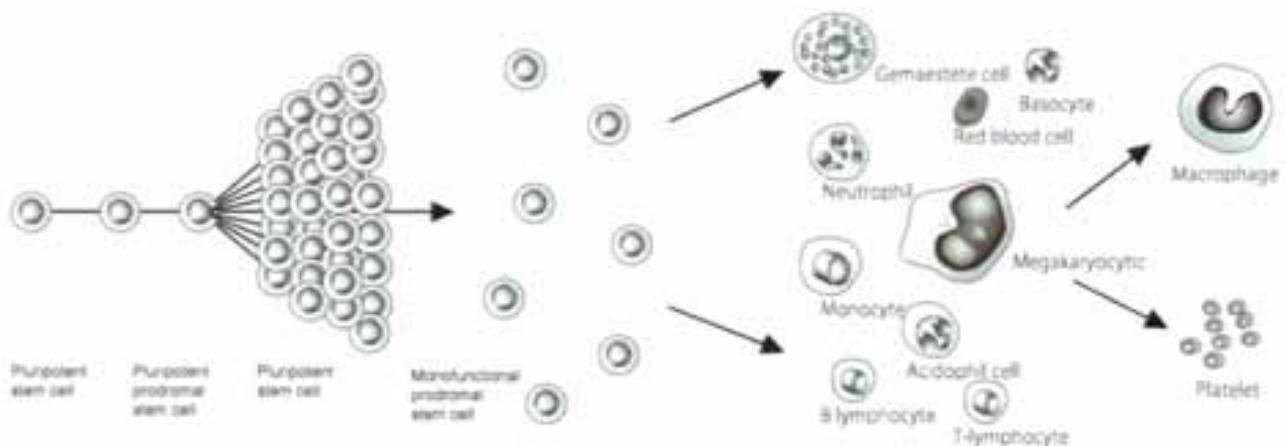

AWG charges somatids.

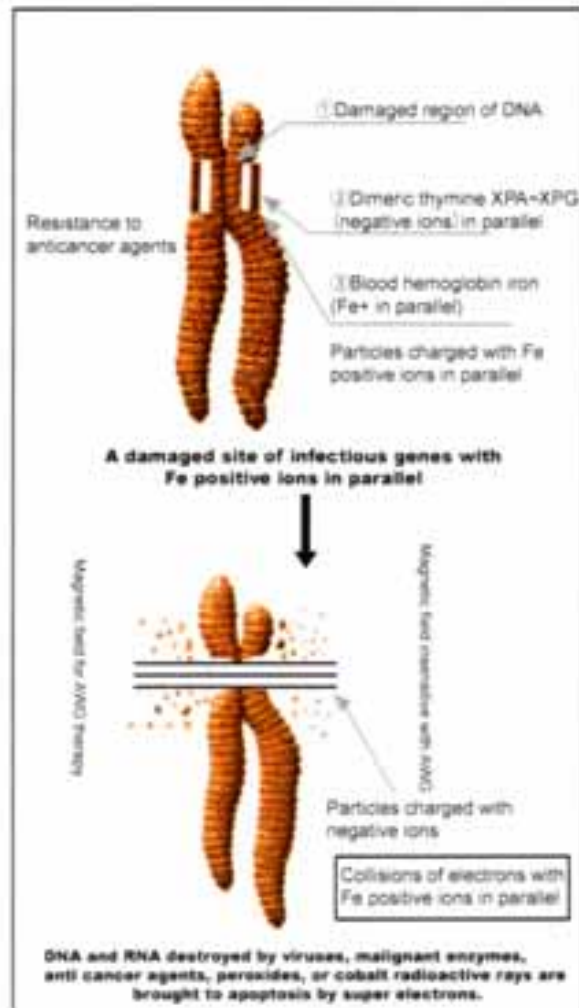

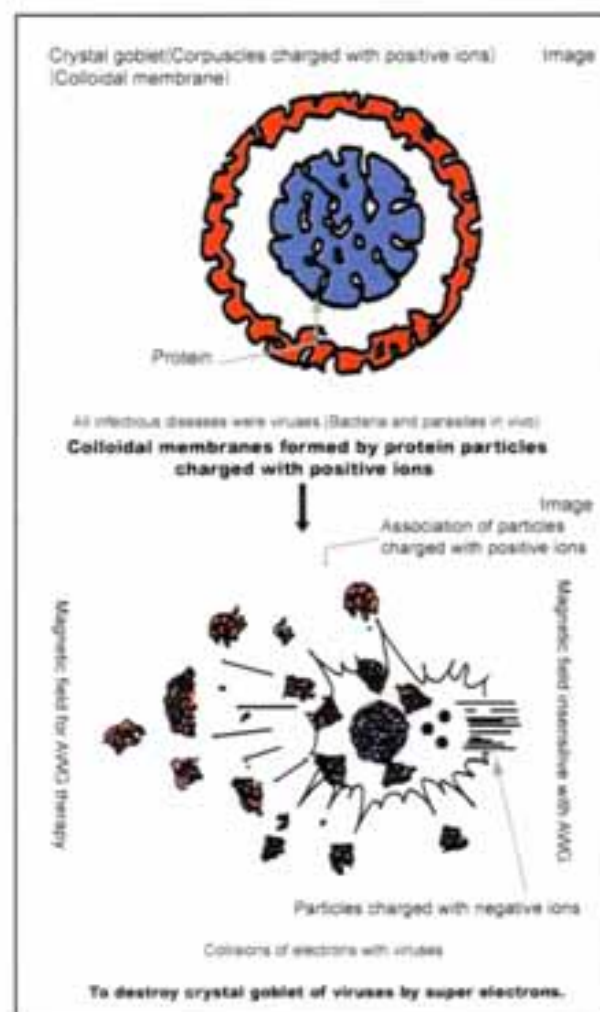

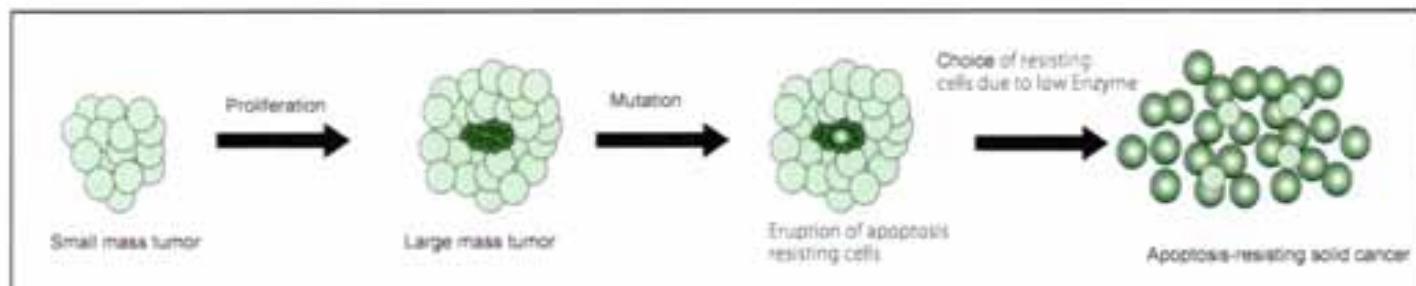

AWG enhances immunity at once

Blood corpuscles between AWG therapeutic magnetic field and insensitive magnetic field stimulate blood factors and blood sugar with electric charged somatids, improve blood stream, and refresh the blood.

AWG and omega3 (long-chain pleiotropic unsaturated fatty acid) jointly stimulate the tip of capillary vessel to secrete hormones(vessel growing factor).

Arbitrary Waveform Generator(AWG)is the first and newest technology supported by theories of Dr.Royal Raymond,who was praised as the greatest biologist in the 20th century and Dr.Gast.Naessens,a discoverer of "somatids"and is patented in eight countries,USA,Russia,Republic of Korea,EA,P.R. China,Canada and Hong Kong as well as Japan.(Dr.G.Naessens had been predicting the appearance of an apparatus to treat patients by irradiating negatively ionized electrons to the human body.)

Efficacy and effects of AWG know till now are as follows

1.AWG kills viruses in vivo.

Viruses bacteria and parasites are killed or destroyed to a condition of apoptosis by applying super electrons to crystal goblets which are formed with their protein particles charged with positive ions

2.AWG rapidly enhances patient's immunity.

AWG projection stimulates pulmonary gland bone marrow spleen etc. activates antigens(LDVC) and has natural killer cells,macrophages,neutrophils,lymphocytes,granulocytes,macrophages rapidly proliferated and thus greatly enhances immunity

3.AWG accelerates secretion of α (alpha)waves, β (Beta)endorphin,oxytocin and melatonin, γ waves

control physiology of the human body.Bendorphin is called morphine in vivo and is told to have an effect of morphine 200 to 400 times as much as morphine.Oxytocin hormone closely relates to maintaining health and figure and is called love hormone.Melatonin has an effect to patients with insomnia attributable to stress or anxiety.It helps such patients giving good sleep.AWG promotes those secretions.

4.AWG destroys intracellular cluster of H₂O in vivo.

AWG destroys a large H₂O cluster accumulated and contaminated H₂O

5.AWG alkalizes the acidified constitution.

Blood and fluid in the body of healthy persons tend to have acidity of 7.4 in pH(when they are infected, their blood and fluid are told acidified and told to die when the acidity becomes to be 5.5 in pH.AWG acts toward Langerhans' islet in the spleen and promotes secretion of insulin, which forces the liver to discharge glycogen (having high concentration alkali),resulting in alkalization of the acidified constitution.

6.AWG charge 60 to trillions somatids(condensers in vivo)in the human body.

Somatids of individual persons are organic bodies and the formation of individual somatids is different like fingerprints.

They cannot be destroyed by powerful radiation of 50 000rems or by incineration at the crematorium.They cannot be cut with a diamond cutter.They can be alive for several hundreds million years even after having been buried in the soil.Nowadays with the development of somatids,

diagnosing the type,symptom,extent of progress and other is available.AWG can charge those somatids.

7.AWG eliminates a paradox of calcium.

When the humans become more than 40years of age calcium in the bone slides into the blood and especially females are apt to suffer osteoporosis.Calcium eluded in the blood assumingly causes rheumatism to nervous tissues,arthritis to joints,alzheimer's disease in brain,parkinson's disease,prehypertension to Muerer's duct,deafness to eustachian duct, and so forth.AWG destroys calcium adhered to these tissue cells with super electrons and excrete it to the outside of the body.

8.AWG improves the focus.

The focus of the lesion is formed with protein factors charged with positive ions such as pus, and pyogenic bacteria.They are decomposed in collisions caused by super electrons and terminate their functions and are forced out of the body as the calcium carbonate solution after combined with sodium hydrogen bicarbonate administered prior to the therapy.

9. AWG cuts a single chain and double chains of DNA and RNA in the infected cell.

When DNAs or RNAs in vivo are damaged,negatively ion charged protein particles of dimeric thymine,XPA and XPG from ribosomal protein stand in rows at the lesion.Positively ion charged iron ions of hemoglobin generated from mitochondria line up overlapped.Super electrons from AWG cause intensive collisions at the double-overlapped lesion and lead to apoptosis of the infected cells.

AWG Activities in the Human Live Body

This apparatus has been developed on the basic of modern medicine and a physical quantum theory. For an efficient use of this apparatus, accurate diagnosis and supplemental uptakes of vitamins, minerals, amino acid and micronutrients of which patients are in need are required.

Key Words

Recurrently skin penetrating receptors.

Skin has a protective function against external stimulation to the living body, and yet it reacts sensitively against substance such as electrons and infrared rays which are comparatively less hazardous to the living body.

AWG super electrons are designed to irradiate electrons of different frequencies, each for 3minutes followed by subsequent 15seconds of the rest (Patented).

This is because receptors present in the skin that allow recurrent penetration through membranes reject the continuous irradiation of super electrons for more than 3minutes. If the irradiation lasts more than 3minutes, the receptors fail or are destroyed, causing anesthesia of the skin or the stiff neck. AWG controls such overdose through CPU with utmost care.

Electronic activation mechanism in vivo

Super electrons irradiated to the human living body received by Cytokines (or protein molecules in vivo) and are relayed to Ras transmits electrons to intracellular somatides (micro condensers in vivo) to charge them and improve the immunity.

Definition of crystal goblet

Crystal goblet has been defined by Kurisu Group during a process of the killing viruses in vivo (The project has started in 11971). The surface of virus, bacteria and parasites are covered with crystal goblet for protecting their own lives. The group discovered that this crystal goblet is formed by protein particles charged with positive ions, and the Group has named the membranes as goblets.

Definition of super electrons

Super electron (10-12 microns in size) is the low voltage electricity of 10mA 12.5volts and is told to give no harm to tissue cells of animals including human beings. Super electrons are irradiated in 69 different frequencies using electrodes installed in an extender(D.MSO solution) which was prepared by specifically processing a bio filter(such as spermia, ova, DNA and germ cell membranes of various animals and destroy) and destroy crystal goblets.
